

VARIHESIVE EXTRA MINCE HYDROCOLLOID DRESSING

MAIN SPECIFICATIONS

- Vahiresive Extra Mince is a hydrocolloid dressing for local treatment of pressure ulcers and slightly exudative lesions.
- Consists of an inner layer of hydrocolloid (in contact with the lesion) contained within a polymeric adhesive matrix.
- The dressing provides a moist environment for the wound which promotes healing, aiding the autolytic debridement, facilitating the migration of epithelial cells, and allowing the removal of non-traumatic dressing without damaging the newly formed tissue.
- The adhesive layer containing elastomeric polymers that increase the ability of the dressing to handle the wound drainage by forming a cohesive gel.
- Vahiresive Extra Mince is a dressing that its composition and design, is particularly suitable for the treatment of exudative skin lesions slightly. It is indicated for pressure ulcers and vascular ulcers.
- Its use is contraindicated in patients with known sensitivity dressing or its components
- Available in different sizes.
