

CAVILON SPRAY

MAIN SPECIFICATIONS

- Rapid drying of polymer solution which, applied to the skin forms a protective painless, transparent, durable film resistant to water and permeable to air, allowing perspiration of the skin.
- Do not have alcohol, so it does not cause burning when applied in regions already hyperemia and injured.
- Barrier that offers total protection against skin irritations caused by urinary and fecal incontinence, and damage caused by adhesives repetitive dressings.
- Applied to the skin forms a colorless transparent protective film against skin irritations caused by urinary and anal incontinence, and damage caused by repeated dressings.
- Suitable also for protecting the skin around stoma, fistulas and draining wounds.
- Not being an alcoholic solution is painless when applied in areas already damaged.
- Gentle to the skin.
- It does not contain alcohol.
- It can be applied on reddened and / or scarred skin as it does not cause burning.
- No cytotoxic, not causing interference on the skin or wound healing.
- Once applied, the product dries quickly.
- Leaves skin breathe. It has good oxygen permeability and vapor.
- It remains in effect until 72 hours (except when used in adhesives of constant exchanges).

- Under normal conditions, there is need to reapply once again every 48 or 72 hours avoiding the constant dressings (more convenient and economical).
- There needs to be removed before reapplication.
- It can be used in neonates from 1 month of age.
- Not preclude the application of diapers and does not interfere with absorbent pads.
- It can be used in skin lesions in stage I and non-oozing lesions in stage II wounds.
- Indications: Skin protection around stoma, fistulas and draining wounds; Incontinence (fecal / urine); Allergic processes the adhesive (tape); Peri-stomata; Exudative wounds; Around cannulas intubation, tracheostomy, gastrostomy; Dermatitis and skin irritation; Product indicated for use in adult patients, children and babies older than one month; Skin lesions caused by urinary and / or fecal incontinence, digestive juices (ostomy), friction, shear and adhesive aggression because constant dressing changes.
- Application technique: The skin should be clean and dry before application; Apply in the region that requires protection against body fluids, adhesives or friction. Allow it to dry. If a second coat is needed, let the first dry completely before applying a new one; In the case of incontinence, reapply every 24 hours, or more frequently, if the need for frequent cleaning; The version of the swab applicator with foam at its end, it is easier to use in self-application made by people with ostomies and draining wounds patients; To protection under adhesives, reapply every dressing changes or tapes.
