

CUTIMED SORBACT GEL HYDROGEL

MAIN SPECIFICATIONS

- For dry or low exuding wounds.
- The Cutimed Sorbact gel combines the effective action of bacterial uptake Sorbact method (for prevention and treatment of infection) with the hydrogel also ensuring the wet wound environment promotes autolytic debridement of low exuding wounds or partially necrotic.
- Captures bacteria and fungi in contaminated wounds, infected and colonized, necrotic and little exudative.
- Promotes autolytic debridement in partially necrotic wounds or crumbling.
- It creates a moist environment in the wound which promotes healing.
- It does not contain preservatives or active chemicals.
- Indications: chronic wounds (such as venous ulcers, arterial, diabetic or pressure ulcers); Dehiscent post-surgical wounds; Traumatic wounds; After excision of fistulae or abscesses; Burns.
