

CUTIMED ALGINATE CALCIUM ALGINATE DRESSING

MAIN SPECIFICATIONS

- The Cutimed Alginate is a calcium sodium alginate dressing (80% calcium and 20% sodium) for the management of highly exuding wounds.
- High absorption capacity.
- Quick gelification.
- It absorbs exudate to the gel, reducing the risk of leakage and maceration.
- The soft, cohesive gel creates and maintains a moist wound environment.
- Good wet integrity: allows quick and easy removal as a single piece.
- Soft and malleable: perfect adaptation to the morphology of the wound.
